

D-1 Agarose

D-1 Agarose is available in 5 types: Low EEO, Medium EEO, High EEO, Special High EEO and Quick Soluble, for different uses.

Features:

- Extraordinary mechanical resistance for more reliable and easier handling.
- Possibility of varying pore size in accordance with particle size by modifying the gel concentration.
- Easy preparation of the gel by simple dilution in aqueous buffers either by standard boiling or microwaving.
- Greater thermal stability due to high hysteresis (difference between gelling and melting temperatures).
- Excellent transparency of the gel & visibility.
- Exceptionally low absorption of staining agents.
- Absence of toxicity (the alternative is polyacrylamide which can be toxic).

Applications:

D-1 LE: with Low EEO. High electrophoresis mobility.

- Nucleic acid analytical and preparative electrophoresis.
- Blotting.
- Protein electrophoresis such as radial immunodiffusion.

D-1 ME: with intermediate EEO.

- Nucleic acids electrophoresis.
- Protein electrophoresis (serum protein and immunoelectrophoresis).

D-1 HE: with high EEO.

- Used in techniques such as serum protein, immunoelectrophoresis and counterimmunoelectrophoresis.

D-1 SHE: with very high EEO.

- For techniques that require high EEO.
- To blend with lower EEO agarose in order to prepare agarose with desired EEO value.

D-1 QS (Quick Soluble): This type of agarose is based on the same superior performance, parameters, applications and functional test as those of agarose D-1 LE. Additional characteristics in this particular type of agarose is the special particle size distribution, providing an easier and faster dissolution step to the final user.
